

Enerest ToGo

Monitoring in your pocket

Our app, which can be downloaded free of charge for Apple and Android devices, offers functions for you as a professional and as a monitor. However, the app can also be used by your customers.

Time-saving support for use on the construction site, but also when tracking errors for your PV systems. The app informs you when Solar-Log WEB Enerest[™] 4 has detected new errors. On the go, you decide whether errors should be converted into a task or archived.

Own consumption at a glance

Your customers can use the app to view all production and consumption values, so you can concentrate on the monitoring and service.

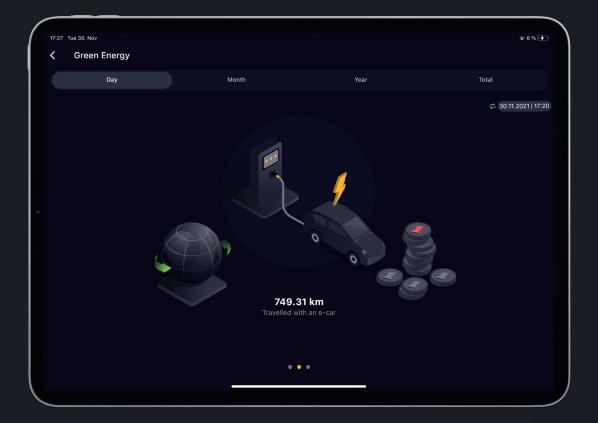

Weekly yield reports can be sent via the app with a push notification. This can be set individually per user.
